A droplet of 0.03g of Goliath Gel is approximately equivalent to 3-4 mm in diameter.

One application is normally sufficient. However, treated areas should be re-inspected after 1-2 weeks. Where initial infestation was severe a second application may be required if the first treatment has been consumed and live cockroaches are still present.

The mean duration of a treatment is usually ranges from 3 to 7 days. Typically cockroaches will die a few hours after a single feed on fipronil. In infested premises, dead cockroaches will normally be seen within 24 hours of treatment.

Resistance management
To avoid the development of resistance in susceptible insect populations, the following recommendations have to be implemented:

Alternate products containing active substances with different modes of action.
Adopt integrated pest management methods such as the combination of chemical, physical control methods and other public health measures, taking into account local specificities (climatic conditions, target species, conditions of use, etc.). Check the efficacy of the production site: if need be, causes of reduced efficacy must be investigated to ensure that there is no resistance or to identify potential resistance.
Do not use the product in areas where resistance is suspected or established.
Inform the authorisation holder if the treatment is ineffective. Avoid continuous use of products.

Storage and disposal
Store Goliath Gel cartridges in the original box away from extremes of temperature. Due to the light sensitivity of the active substance, exposure to light should be avoided after the product is applied. The product should only be used in dark places.
Remove excess of product with absorbent paper.
Do not discharge unused product on the ground, into water courses, into pipes (sink, toilets...) nor down the drains.
Dispose of unused product, its packaging and all other waste in accordance with local regulations.
Shell life: 3 years.

First aid instructions
Eye contact: In case of contact with eyes, remove contact lenses if present and rinse the eye slowly and gently with water for 15-20 minutes.
Inhalation: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Get medical attention if symptoms occur, show this container or label.
Ingestion: Wash out mouth with water. Get medical attention if symptoms occur, show this container or label.
Skin contact: In case of contact with skin, wash with soap and water. Remove and launder any contaminated clothing.
